

Xcel Delivery Service Expands Warehousing Services

Xcel's New Facility to Increase Warehouse Space and Efficiency

TUCSON, AZ—Xcel Delivery Services is in the final stages of building a new office and warehouse that will expand its storage capacity by almost 10,000-square feet and allow the company to accept larger loads and offer increased efficiency in both storage and distribution services. Owners **Kelly and**

Mark Spivack are proud to say that this is the third facility the company has outgrown since its inception only seven years ago.

CEO Mark Spivak attributes the company's success to three factors:

"Our emphasis has always been on providing the most professional service possible and doing it efficiently. We also feel it is essential to back up that service with the ultimate in customer service," explains Mark. "We are firm believers that providing this type of service promotes trust and that trust is what has made our business flourish over the past seven years."

The new facility was designed specifically for increased effectiveness with loading docks that enable cross-docking and allow for larger loads. Xcel will continue to offer distribution services as well as airport cargo work, hot shot, urgent, pharmaceutical and medical deliveries with a staffed dispatch office that is open around the clock.

"The new facility will allow for much smoother operations and greater efficiency, and that's a change we look forward to," notes Kelly Spivack, vice president and CFO. "We've always had very professional staff and drivers and that will remain unchanged along with our commitment to excellent customer service."

The only change will be the physical address and the improved offerings. Check out the Xcel website – www.xceldelivery.com – to see the new facility located at 3770 S. Broadmont, Tucson, Arizona. **MCW**
